

Ashith Marath is currently a Ph.D student at Center for Research and Education in Advanced Transportation Engineering Systems (CREATES) at Rowan University. He is conducting research on developing electrically conductive asphalt pavements for deicing application in cold regions. He has a bachelor's degree in civil engineering from TKM college of engineering, India in 2017, and he completed his master's degree in transportation systems engineering from Indian Institute of Technology (IIT) Bombay in 2020. He has research experience in the areas of frost susceptible asphalt pavements, climate change and impacts on pavement performance, laboratory characterization of asphalt pavement materials, and developing computer program tools using a multiple programming languages.
